

Project Milestone 5 - Test Plans

Recitation 112 Team 2: Buff Buddies

Owen Carlson, Brianna Griffin, Aileen Ma, Alex Mazur

1. Test #1:

The first test used to determine user acceptance will be creating an account and adding a location before logging out and logging back in to confirm that the user database works and that locations can be saved to a users account.

2. Test #2:

The second test will involve adding several locations to a users list to ensure there are no issues with adding more cards as well as confirming the weather cards display all relevant information properly.

3. Test #3:

The final test will require activating a weather card to gather more info about a specific location saved to the user's list, such as the map to the destination. This will determine if the TTP functions properly and whether all relevant info is displayed.
